Report Overview:

An ANA (antinuclear antibody) test looks for antinuclear antibodies in your blood. If the test finds antinuclear antibodies in your blood, it may mean you have an autoimmune disorder. An autoimmune disorder causes your immune system to attack your own cells, tissues, and/or organs by mistake. These disorders can cause serious health problems.

Antibodies are proteins that your immune system makes to fight foreign substances like viruses and bacteria. But an antinuclear antibody attacks your own healthy cells instead. It's called "antinuclear" because it targets the nucleus (center) of the cells.
