Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Antioxidant TNPP competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.The antioxidant TNPP (trinonylphenyl phosphite) is a typical phosphite-based secondary antioxidant, appearing as a pale yellow to colorless, transparent liquid. It is primarily used to capture free radicals and decompose peroxides during polymer processing, preventing thermal oxidative degradation. It is often used in combination with primary antioxidants (such as hindered phenolic antioxidants BHT, 1010, and 1076) to create a synergistic effect. Global production in 2024 was expected to be approximately 50,000 tons, with an average selling price of US$2,800 per ton.The antioxidant TNPP (trinonylphenyl phosphite) is a typical phosphite auxiliary antioxidant and is widely used in polymer materials such as polyolefins, PVC, ABS, and polyurethane. Its main function is to decompose peroxides produced during polymer processing to prevent thermal oxidative aging. It has a good synergistic effect when used in combination with hindered phenolic primary antioxidants, which can improve the thermal stability and transparency of the material.The industry currently exhibits regional disparities. In Asia, particularly China, TNPP remains a highly demanded component in plastics processing. However, in Europe and the United States, its use is strictly restricted due to controversy surrounding the environmental and health risks of nonylphenols. In the medium to long term, driven by stricter regulations and the development and promotion of green alternatives, the industry is trending toward low-toxic, environmentally friendly, and highly effective alternative phosphites or composite antioxidants.

The global Antioxidant TNPP market size was estimated at USD 140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the
