Abstracts

Antisense Oligonucleotides (ASOs) are a class of nucleic acid drugs designed to target specific RNA molecules within cells. They work by binding to complementary RNA sequences, which can modulate gene expression in various ways. ASOs have been developed to treat a wide range of genetic and other diseases. The Antisense Oligonucleotide (ASO) Market is driven by the promising potential of ASOs in treating genetic disorders, rare diseases, and certain cancers by targeting specific RNA molecules and inhibiting their expression. ASOs represent a groundbreaking therapeutic approach that offers the possibility of highly targeted and personalized treatments. As our understanding of genomics and molecular biology advances, and precision medicine gains momentum, the demand for ASOs continues to grow. Innovations in ASO design, chemical modifications, and delivery technologies further contribute to market expansion. However, a significant challenge for this market is the need to address effective delivery to the target tissues, ensure long-term safety and efficacy, and navigate complex regulatory pathways. Overcoming delivery hurdles, minimizing off-target effects, and managing high development costs are ongoing challenges. Additionally, the market faces competition from traditional therapeutic approaches and the need for continuous research and development to fully unlock the therapeutic potential of ASOs. Striking a balance between providing safe, effective, and accessible ASO therapies while addressing scientific and regulatory challenges is essential for the continued growth of the Antisense Oligonucleotide (ASO) Market.

The global Antisense Oligonucleotides-based Therapeutics market size was estimated at USD 4149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.30% during the forecast period.
