Report Overview

Knee, spinal and hip injuries are the most common form of the injuries associated with the accident and trauma. The increasing number of lumbar disc herniation and spinal injuries lead to demand for innovative devices such as anular closure devices. Anular closure devices such as Barricaid anular closure device is an implant which has three components mesh (PET layers connected with PTFE-coated PET sutures), anchor and marker. Barricaid anular closure device is made of titanium and it's attached to a polyester mesh. Barricaid anular closure device is intended to close the hole in patient spinal bone following a limited discectomy procedure in the lower back after an initial herniated disc. Barricaid anular closure devices are intended to implant for discectomy to prevent reherniation and recurrence of pain or dysfunction. Some of the other products available for the annulus fibrosus repair and annulus closure are the Xclose Tissue Repair System, Anchor Band Suturing System, Inclose Surgical Mesh System, and Disc Annular Repair Technology (DART) System.
