Report Overview

The AOV system, also known as Automatic Opening Vent, is a mechanism designed to automatically open windows or vents in buildings in case of a fire. This system is crucial for smoke control and evacuation purposes, as it helps to release smoke and heat from the building, allowing occupants to safely exit and firefighters to enter the premises. AOV systems are typically integrated with fire detection systems to ensure timely and effective operation during emergencies. These systems are widely used in commercial and residential buildings, as well as in industrial settings, to enhance fire safety measures and comply with building regulations.

In recent years, the market for AOV systems has been experiencing steady growth due to increasing awareness about fire safety regulations and the importance of smoke control systems in buildings. The implementation of stringent building codes and regulations mandating the installation of AOV systems in new constructions and the retrofitting of existing buildings has been a key driver of market growth. Additionally, the growing focus on sustainable building practices and the integration of smart technologies in building management systems have also contributed to the demand for AOV systems.
