Abstracts

API Mocking Software is a tool that allows developers and teams to simulate the behavior of APIs (Application Programming Interfaces) without having to rely on the actual backend services. By creating mock versions of APIs, developers can test and validate their applications' interactions with external systems before those systems are fully implemented or available. This is particularly useful in scenarios where the actual API may be incomplete, unstable, or not yet developed. The API simulation software market is currently experiencing strong overall growth, driven by the accelerated digital transformation and demand for efficient testing and development tools. This is particularly evident in industries such as healthcare, automotive, electronics, and aerospace. Demand for digital simulation tools has surged during the pandemic, further solidifying the value of simulation software in optimizing processes, reducing costs, and accelerating product development. The API simulation software market is expected to continue its growth momentum and gain widespread adoption across a wider range of industries in the coming years, driven by the increasing demand for agile development and continuous delivery. The demand for API simulation is expected to further expand, particularly with the rise in popularity of cloud-native and microservices architectures.

The global API Mocking Software market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
