Report Overview

The apochromatic wide spectrum UV lens is a special optical lens that can eliminate chromatic aberration in a wide range of ultraviolet light, that is, ultraviolet light of different wavelengths can be imaged at the same point, thereby improving the clarity and quality of the image. The design principle of the apochromatic wide spectrum UV lens is to use a combination of three or more glass materials with different refractive index and dispersion, and through precise curved surface design and optimization, three or more UV wavelengths can achieve confocal or approximate Confocal state. The application fields of apochromatic wide spectrum UV lenses include UV imaging, UV spectroscopy, UV microscopy, UV detection, etc.
