Abstracts

Apoptosis detection refers to the identification and measurement of apoptotic cell death within a biological sample. Apoptosis, also known as programmed cell death, is a tightly regulated and controlled process that plays a crucial role in various physiological and pathological conditions. Detecting apoptosis is essential for understanding cellular responses, studying diseases, and evaluating the efficacy of therapeutic interventions. The trend toward multiplexed detection allows researchers to simultaneously assess multiple apoptotic markers within the same sample. This can provide a more comprehensive view of the apoptotic process and its associated signaling pathways.

The global Apoptosis Detection market size was estimated at USD 5333.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
