Abstracts

Apple Juice Concentrate (AJC) is produced at 70-71 brix at low acidity from apples. This product can be used in fruit juices and tea. The juice concentrate is processed to remove a defined proportion of the natural water content found in the fruit and produce a concentrated product which is smaller in volume. This can greatly reduce the costs required for transportation and the concentrate can, if required, be returned to its single-strength state by reconstituting with water once it reaches the final processing destination.

The global Apple Juice Concentrate market size was estimated at USD 1568.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
