### Report Overview

An application delivery controller (ADC) is a computer network device in a datacenter, often part of an application delivery network (ADN), that helps perform common tasks, such as those done by web sites to remove load from the web servers themselves. Many also provide load balancing. ADCs are often placed in the DMZ, between the outer firewall or router and a web farm.

North America application delivery controller market accounted for over 25% of the total revenue share in 2015, primarily owing to the well-established IT & telecom sector in the region.
