Abstracts

Application-layer AI Agents in Customer Service refers to end-user-facing agentic customer service products and solutions that sit on top of model-layer and platform-layer capabilities, while packaging vertical know-how, business workflows and user interfaces into ready-to-deploy applications. Typical examples include customer-facing chatbots (web/app mini-program bots, virtual agents on hotlines), agent-assist copilots (real-time guidance, QA and script suggestions) and operations/marketing-focused agents. Compared with model- and platform-layer offerings, the application layer is optimized for branded experiences and business KPIs such as conversion, CSAT and automation rate and is tightly integrated with existing enterprise systems and processes. Revenue is primarily generated through implementation projects plus SaaS subscriptions or per-seat / per-interaction pricing, with ARPU and gross margin strongly shaped by the industry vertical and degree of customization.
