Abstracts

Application lifecycle management is the process of managing an app's development, from design to final release, and establishing a framework for managing changes. The typical application lifecycle starts with the design of a new app or feature. The app is planned based on requirements analysis and specifications. Next, the app is implemented per the specifications and then tested. The new app is staged for final testing before it gets deployed to production. This cycle repeats for every new app or feature. It's also used for app maintenance, such as when features are enhanced or bugs are fixed. A governance and change management framework directs the development process. USA is the largest market with about 38% market share. Europe is follower with about 31% market share. The main manufacturers are HP, Atlassian, Techexcel, IBM, Microsoft, Rocket Software, Enalean etc. Microsoft is the largest manufacturer with about 15% market share.
