Abstracts

Application release automation (ARA) is the process of packaging and deploying an application or software update. ARA goes from development through production. The process, and the tooling that makes it happen, brings together solutions that automate deployment, manage and model environments and coordinate releases. ARA solutions sometimes form part of the broader DevOps process. **Increasing Demand for Agile and DevOps Practices:** The widespread adoption of Agile and DevOps methodologies in software development and deployment necessitates efficient automation tools like ARA software to support continuous integration, continuous delivery (CI/CD), and rapid release cycles. **Accelerated Software Development Life Cycles:** Organizations aim to shorten software development life cycles to bring products to market faster. ARA software automates and expedites the release and deployment processes, reducing time-to-market for applications. **Complexity of Multi-Platform and Multi-Environment Deployments:** Enterprises often need to deploy applications across diverse platforms and environments. ARA software handles the complexity of multi-platform deployments by automating the process and ensuring consistency across different environments.
