## Abstracts

An Application Specific Standard Product (ASSP) Integrated Circuit is a type of semiconductor device designed for a specific application domain but sold to multiple customers as a standard product, combining the customization of ASICs with the broader applicability of standard ICs, balancing cost-efficiency, performance, and market flexibility. The ASSP integrated circuit industry chain begins upstream with raw material suppliers (silicon wafers, rare earths, specialty gases, and photomasks) and semiconductor equipment manufacturers, followed by midstream semiconductor foundries, design houses, and integrated device manufacturers (IDMs) that handle circuit design, wafer fabrication, packaging, and testing, while downstream consists of electronics OEMs across consumer, automotive, industrial, and telecom sectors that integrate ASSPs into end products, supported by distributors and service providers, forming a globalized supply network heavily influenced by chip design innovation, foundry capacity, and demand shifts in fast-growing digital industries. Current projects under construction and planned in the ASSP market include new wafer fabrication plants in the United States, Taiwan, South Korea, and Europe to expand capacity for automotive and AI-related ASSPs, alongside R&D initiatives for next-generation connectivity ASSPs (5G/6G modems, Ethernet controllers, automotive Ethernet), multimedia accelerators for AR/VR, and industrial IoT chips, with major players such as TSMC, Samsung, Intel, and GlobalFoundries investing in scaling advanced nodes, while fabless companies and IDMs pursue specialized ASSP development partnerships with automotive, telecom, and consumer electronics firms to meet rapidly evolving market demands. Market Average Gross Profit Margin: ~38?42%.

The global Application Specific Standard Product (ASSP) Integrated Circuit market size was estimated at USD 7056.0 million in 2025 and is projected to grow at a compound

annual growth rate (CAGR) of 6.60% during the forecast period.
