Report Overview

The apricot kernel separator is a mechanical equipment specially used for apricot processing. It is mainly used for the apricot kernel-meat separation process. It can effectively separate the apricot pulp from the kernel for subsequent processing or consumption. The apricot kernel separator achieves the apricot kernel-meat separation through different technical means. For example, the design of rotating rollers and fixed concave surfaces is adopted, and the relative movement between them is used to separate the apricot pulp and kernel under the action of extrusion and friction. Another way is to use a rotating peeling blade design to break and peel the apricot meat, and then discharge the apricot meat and apricot kernel separately through the guide tooth plate and centrifugal force.
