Report Overview

Farming of aquatic plants, mollusks, fish, crustaceans, algae, and other aquatic organisms is termed as aquaculture. The process includes growing aquatic organisms under controlled conditions in fresh water and sea water in order to attain high production. Aquaculture is aimed to develop aquaculture products, largely for the food & beverages industry. Aquaculture chemical compounds help boost the immunity of organisms. They protect aquatic animals from different types of infections and provide them with basic nutrients. They contain nutrient and energy sources, which are essential for growth of fish. Aquaculture chemicals act as food supplements for aquatic animals and, in turn, boost their health and growth.
