Abstracts

Aqueous film forming foams (AFFF) is a film-forming foam fire extinguishing agent, which is mainly prepared from fluorosurfactant, foaming agent, etc. Fires of non-polar or hydrocarbon fuels are extinguished after mixing with water in a foam tank (foam proportion mixing device) at a concentration of 1%, 3% or 6%. Can be used in combination with compatible dry powder fire extinguishing agents and can be used with most foamed foams in fire extinguishing processes. In the process of fire extinguishing, the water separated from the foam layer of the aqueous film-forming foam liquid can form a well-sealed water film on the surface of the fuel, which can isolate the contact between the fuel and the air. , High-efficiency oil fire fighting. It is characterized by low energy consumption, requiring only minimal stirring energy. The resulting foam has excellent fluidity and can quickly overwhelm flames to put out oil fires. Compatible with most proportioning units (foam tanks) and foam extinguishing units. Can be used in combination with compatible dry powder fire extinguishing agents. It is suitable for extinguishing Class A and B hydrocarbon fires, such as oil and fuel oil, gasoline, flammable materials, etc. It can also be used to extinguish large oil tank fires by means of "submerged jet". However, it is not applicable to the fire of polar solvents or water-soluble fuels, such as alcohols, esters, aldehydes, ethers, ketones and other flammable liquids. Global key players of aqueous film forming foams (AFFF) include Tyco Fire Protection Products, Naffco, Perimeter Solutions, etc. Asia-Pacific is the largest producer of aqueous film forming foams (AFFF), holds a share about 55%, followed by North America, and Europe. In terms of purity, 6% AFFF is the largest segment, with a share about 50%. And in terms of application, the largest segment is petrochemical and chemical plants, with a share about 40%.
