Abstracts

A head-mounted display (HMD) is a display device, worn on the head or as part of a helmet (see Helmet-mounted display for aviation applications), that has a small display optic in front of one (monocular HMD) or each eye (binocular HMD). An HMD has many uses including gaming, aviation, engineering, and medicine. AR head mounted display (HMD) optical waveguide is a key optical component that plays a vital role in AR technology. Optical waveguide technology is characterized by thinness, high transparency, clarity and wide field of view, and is a key technology for realizing consumer-grade AR glasses. As the technology continues to mature, the application of optical waveguide solutions in AR head-mounted displays is becoming more and more extensive. Array optical waveguides and diffraction optical waveguides and other technologies are constantly iterating, solving the problem of seamless integration of virtual images with the real world and improving the user's immersive experience. As consumers' awareness of AR technology increases, the consumer AR market is rising rapidly. Optical waveguide technology has become the preferred solution for consumer-grade AR head-mounted displays with its thin and light design and high light transmittance. AR head-mounted displays have broad application prospects in education, medical care, entertainment, industrial inspections and other fields. Optical waveguide technology can meet the use needs in different scenarios and promote the rapid development of the AR head-mounted display market.

The global AR Head-mounted Display (HMD) Optical Waveguide market size was estimated at USD 394.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.50% during the forecast period.
