Abstracts

AR resin optical waveguide lenses are optical lenses used in Augmented Reality (AR) devices. They employ resin material as the waveguide medium, leveraging the principle of optical waveguide to transmit image information to the human eye. Resin materials are relatively lightweight, possess a certain degree of toughness and elasticity, and are less prone to breaking upon impact. Compared to glass lenses, they offer a more comfortable and safe wearing and using experience. Additionally, the production cost of resin optical waveguide lenses is slightly lower than that of optical glass, making them a potentially widely applicable option in consumer-grade AR devices.

The global AR Resin Waveguide Lenses market size was estimated at USD 63.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
