Abstracts

The AR (Augmented Reality) waveguide display module is a crucial component in augmented reality display technology. It primarily utilizes a special optical element, the waveguide, to direct light and transmit virtual image information to the human eye for projection. This method integrates optical elements into a thin waveguide plate, significantly reducing the thickness and weight of the entire display module. While resembling traditional eyeglasses in appearance and wearing sensation, it achieves an augmented reality image overlay effect, allowing users to view virtual image information within real-world scenes.

The global AR Waveguide Display Modules market size was estimated at USD 822.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
