Abstracts

Aramid Fiber is man-made high-performance fiber, with molecules that are characterized by relatively rigid polymer chains. These molecules are linked by strong hydrogen bonds that transfer mechanical stress very efficiently, making it possible to use chains of relatively low molecular weight. Aramid fibers are a class of heat-resistant and strong synthetic fibers. They are used in aerospace and military applications, for ballistic-rated body armor fabric and ballistic composites, in bicycle tires, and as an asbestos substitute. The name is a portmanteau of "aromatic polyamide". They are fibers in which the chain molecules are highly oriented along the fiber axis, so the strength of the chemical bond can be exploited. In recent years, aramid fiber has emerged as an ideal industrial fiber due to its unique properties such as high strength, dimensional stability, and heat resistance.

Market Drivers: With the growing demand for protective products, the consumption of aramid fiber is likely to witness strong growth. Aramid fiber has proven to be a suitable alternative to asbestos, especially in case of composite materials. In the near future, increasingly stringent anti-asbestos standards will bring brighter prospects for the application of aramid fiber in various industries.

Market Competition: The major global manufacturers of aramid fibers (Para and Meta) include Dupont, Teijin, Yantai Spandex, Kolon Industries, Hyosung, Toray, X-FIPER New Material, JSC Kamenskvlokn, and Huvis. The top five players will account for a revenue share of approximately 70% in 2023.

Market Development: The market is undergoing continuous technological upgrades, especially in military equipment. Industry players have been working to improve productivity and manufacturing capabilities through automation of production processes, thereby increasing cost competitiveness.

Market News: Toray announced a \$366 million plan to expand its production facilities in South Korea by 2025, reflecting its significant commitment to the Korean market, which it has been committed to since 1963. The investment, which includes new aramid fiber and carbon fiber production lines, is driven

by growing domestic demand and Toray's strategy to position South Korea as a major global sales and export center.

The global Aramid Fiber (Para and Meta) market size was estimated at USD 3358.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
