Abstracts

Aramid Fiber is man-made high-performance fiber, with molecules that are characterized by relatively rigid polymer chains. These molecules are linked by strong hydrogen bonds that transfer mechanical stress very efficiently, making it possible to use chains of relatively low molecular weight. Aramid fibers are a class of heat-resistant and strong synthetic fibers. They are used in aerospace and military applications, for ballistic-rated body armor fabric and ballistic composites, in bicycle tires, and as an asbestos substitute. The name is a portmanteau of "aromatic polyamide". They are fibers in which the chain molecules are highly oriented along the fiber axis, so the strength of the chemical bond can be exploited. Europe is the largest Aramid Fiber market with about 37% market share. USA is follower, accounting for about 35% market share. The key manufacturers are DowDuPont, Teijin, JSC Kamenskvolokno, Kolon, Hyosung, Huvis, TAYHO, Bluestar, Sinopec Yizheng Chemical Fibre, Guangdong Charming, Hebei Silicon Valley Chemical, Zhaoda Specially Fiber, SRO etc. Top 3 companies occupied about 78% market share.

The global Aramid Fibers market size was estimated at USD 5072.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
