Report Overview

Arc extinguishing substations are key facilities used in power systems to quickly cut off the current and extinguish arcs in the event of system failure or short circuit to prevent equipment damage, fire or personnel injury. They usually include equipment such as arc extinguishing switches, circuit breakers, capacitors and reactors, as well as corresponding control systems and safety protection devices. In the event of a fault, the arc-extinguishing substation can quickly disconnect the circuit and cut off the arc to ensure the safe operation of the power grid.
