Abstracts

The primary function of an Arc Fault Circuit Interrupters (AFCI) is to detect and identify dangerous grounding, parallel, and series Arc faults, and to actuate the device that disconnects the current in time to avoid electrical fire. When an arc fault occurs, because the current intensity is small, lower than the set value of the overcurrent protection widely installed in the power system, especially in the low-voltage distribution field, the installation of AFCI arc fault circuit breaker in the distribution line terminal can detect the arc in time and cut off the circuit, effectively reducing the loss caused by the arc.

The global Arc Fault Circuit Interrupter AfcI market size was estimated at USD 4188.78 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 2.00% during the forecast period.
