Report Overview

Arc flash events are unique and extremely dangerous exposures that workers encounter while doing electrical work. Although the majority of workplace electrical injuries result from electric shock, the burns from the release of intense radiant energy during an arc flash event can cause severe, and even fatal injuries. Temperatures can reach as high as 35,000°F, with fatal burns occurring even at distances over ten feet. Given how dangerous this hazard is, protective measures must be put in place for worker safety. Arc-flash protection equipment has the functions of flame-retardant, heat-insulating, anti-static, and arc-proof, and will not fail or deteriorate due to washing. Once the arc-proof clothing comes into contact with arc flames or hot heat, the high-strength and low-strength bulletproof fibers inside will automatically expand rapidly, thereby making the fabric thicker and denser, forming a protective barrier to the human body.
