Abstracts

The Arc Suppression Coil Complete-Set Device is a compensation device for low-current grounding systems. Its core components include grounding transformers, arc suppression coils, damping boxes, controllers, etc. Its main function is to generate inductive current to compensate for grounding capacitance current when a single-phase grounding fault occurs in the system, thereby reducing the current passing through the grounding point, preventing the generation of arcs or maintaining the stability of arcs, and ultimately achieving the purpose of eliminating arcs at the grounding point. The arc suppression coil set overcomes the defect of small adjustment range of previous arc suppression coil devices and can be adjusted. Algorithms such as residual current increment method and active power method are used to select high-voltage grounding lines, and the line selection is accurate and rapid.

The global Arc Suppression Coil Complete-Set Device market size was estimated at USD 653.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
