Report Overview:

The Archimedes screw pump, also known as the Archimedean screw or simply the screw pump, is a mechanical device used for lifting or transferring fluids, typically water, from a lower elevation to a higher one. It is based on the principles attributed to the ancient Greek mathematician and inventor Archimedes, who is believed to have designed and used such a device around the 3rd century BC. The Archimedes screw pump consists of a helical screw or blade, which is housed within a cylindrical or conical casing. When the screw is rotated, it effectively lifts or pushes the fluid along its length, allowing for the transfer of liquids from one location to another.

The Global Archimedes Screw Pump Market Size was estimated at USD 290.89 million in 2023 and is projected to reach USD 341.32 million by 2029, exhibiting a CAGR of 2.70% during the forecast period.
