## Abstracts

Functional coatings in general is defined as a material (usually a liquid) which is applied onto a surface and appears as either a continuous or discontinuous film after drying. Functional glass coatings are a kind of special performance coatings for glass industry. The architecture functional glass coating market is experiencing significant growth due to the demand for advanced coatings that enhance the performance and aesthetics of glass surfaces in buildings. These coatings provide benefits such as solar control, energy efficiency, anti-glare properties, and self-cleaning capabilities. They are applied to windows, facades, and glass panels to regulate heat, reduce UV radiation, and minimize maintenance requirements. As sustainable building practices and energy conservation become priorities, functional glass coatings are increasingly adopted in architectural design. These coatings improve indoor comfort, lower energy consumption, and contribute to eco-friendly construction. The market's expansion is driven by the integration of technology into modern architecture, with manufacturers developing innovative coatings that align with environmental concerns and the quest for efficient building solutions.

The global Architecture Functional Glass Coating market size was estimated at USD 786.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
