### Report Overview:

Argon/oxygen blends are most widely used for conventional and pulsed spray transfer on clean (little or no scale or residual oil), plain Carbon and Stainless Steel. These blends, typically 1, 2 or 5% oxygen, provide good arc stability and very low levels of spatter and fume. Higher levels of oxygen will also increase puddle fluidity that may make out-of-position welding more difficult. Generally used for welding heavy section Carbon Steel for farm equipment, military transports, ships and automotive assemblies. These blends are also used for spray arc welding of both ferritic and Austenitic Stainless Steel components.

The Global Argon Oxygen Mixture Market Size was estimated at USD 127.28 million in 2023 and is projected to reach USD 150.21 million by 2029, exhibiting a CAGR of 2.80% during the forecast period.
