## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Arm-Based Computers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. As of 2024, global sales of Arm-Based Computers reached approximately 1.5 million units, with an average unit price of around USD 417. Arm-Based Computers are computing devices powered by processors built on the Arm (Advanced RISC Machine) architecture, covering desktops, laptops, servers, tablets, and embedded industrial PCs. Known for low power consumption, high energy efficiency, and superior performance-per-watt, Arm-based systems integrate custom SoCs (System-on-Chip) that combine CPUs, GPUs, AI accelerators, and multiple peripheral interfaces. They are widely applied in portable computing, cloud edge nodes, IoT devices, and high-density data center workloads. With growing OS and software ecosystem support for the Arm platform, these computers are increasingly adopted in ultrathin laptops, cloud workstations, and high-performance embedded systems, gradually challenging the dominance of traditional x86 architectures.

The global Arm-Based Computers market size was estimated at USD 626.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Arm-Based Computers market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
