Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Arm and Hand Operating Table competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of arm and hand operating tables will reach 542,400 units, with an average selling price of US\$627.03 per unit. Arm and hand operating tables are medical devices designed specifically for upper limb and hand surgery and are a core component of the basic operating room support system. They typically feature a multi-section tabletop design, including a headboard, backboard, hipboard, legboard, and adjustable armrests and shoulder rests. Electric hydraulic or mechanical transmission systems enable lifting, tilting, forward and backward swinging, and independent adjustment of each panel to accommodate various surgical positions (such as abduction, flexion, and immobilization). Arm and hand operating tables have a gross profit margin of 18.34% and a gross profit of \$115. Single-line production capacity ranges from 20,000 to 40,000 units per year. The upstream of arm and hand operating tables are suppliers of metal materials (stainless steel/titanium alloy), electronic components and precision parts, represented by ThyssenKrupp (steel), Allegheny Technologies (titanium alloy), Molex (electronic components), Huichuan Technology (reducers), Yaskawa Electric (servo systems), etc.; the midstream is the manufacturing and system integration of operating tables, covering design and development, mechanical assembly, and intelligent control system development, represented by Getinge (global market share of 25%), Hill-Rom, Stryker, Mindray Medical, Shanghai Pax Medical Equipment, etc.; the downstream is medical institutions and clinical applications, including general hospitals (such as Peking Union Medical College Hospital and West China Hospital of Sichuan University), orthopedic specialty hospitals, and emergency centers. The application scenarios cover orthopedic surgery (joint

replacement/fracture repair), neurosurgery (DBS surgery), minimally invasive hand surgery (tendon sheath repair/replantation of severed fingers) and rehabilitation medicine.

The global Arm and Hand Operating Table market size was estimated at USD 340.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
