## Abstracts

An Armoured Patch Cord is a type of fiber optic cable designed with an additional protective metal layer, typically a stainless steel or aluminum spiral tube, which provides enhanced mechanical strength and durability without compromising signal performance. This robust structure protects the internal optical fibers from physical damage caused by crushing, rodents, abrasion, or accidental bending, making them ideal for harsh environments. Despite the armor, these patch cords maintain flexibility and are compatible with standard fiber optic connectors such as SC, LC, FC, and ST. Armoured patch cords are commonly used in data centers, telecommunications rooms, military installations, and industrial settings where cables are exposed to mechanical stress or require extra security. They are available in single-mode or multi-mode types and are designed to maintain low signal loss and high performance over long distances. Their reliable construction ensures long-term stability and protection for mission-critical fiber optic communication systems.

The global Armoured Patch Cord market size was estimated at USD 852.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
