Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Artemia Extract competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Artemia extract refers to the bioactive material derived from *Artemia salina*, commonly known as brine shrimp, a small crustacean found in hypersaline lakes and salt ponds. The extract is obtained from whole Artemia organisms or their cysts (eggs) through enzymatic hydrolysis, solvent extraction, or fermentation-based methods. It contains a complex composition of peptides, amino acids, fatty acids, nucleotides, and minerals, which contribute to its biological and functional value. Due to its rich nutrient profile and presence of natural stress-resistance compounds, Artemia extract has become an important natural ingredient in a variety of industrial applications, particularly in cosmetics, pharmaceuticals, and aquaculture nutrition. In the cosmetic and personal care sector, Artemia extract is defined as a marine-derived bioactive that supports cellular metabolism and helps protect skin against environmental stress. It is widely used in anti-aging, energizing, and skin-repair formulations due to its ability to stimulate ATP synthesis and enhance cellular vitality. In nutraceutical and pharmaceutical contexts, the extract is recognized for its antioxidant and immune-supporting effects, reflecting the biological resilience of Artemia species that thrive in extreme environments. Moreover, in aquaculture, Artemia extract serves as a functional ingredient in larval feeds and growth stimulants, improving survival rates and promoting healthy development in fish and shrimp hatcheries. Thus, the Artemia extract market can be defined as a specialized segment within the marine bioactive and natural ingredient industries, characterized by its versatility, nutrient richness, and multifunctional benefits. It bridges marine biotechnology and sustainable resource utilization, transforming a naturally abundant organism into high-value bioactive materials. The market's definition

embodies the convergence of marine science, functional ingredient innovation, and sustainability, reflecting growing global interest in ocean-derived resources for health, beauty, and animal nutrition applications. In 2024, global Artemia Extract production reached approximately 158 MT, with an average global market price of around US\$ 352.6 per kg. The global single-line production capacity ranges from 20 to 30 MT per year. The industry's gross profit margin is approximately 20%-25%.

The global Artemia Extract market size was estimated at USD 55.86 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
