## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Artemisia Extract competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Artemisia Extract was approximately 2,500 tons, with an average selling price of about US\$85 per kilogram. Production capacity in 2024 reached 3,120 tons, with an average gross profit margin of 15-25%. Artemisia Extract is a brownish-yellow powdery chemical raw material made from the stems and leaves of plants in the Artemisia genus of the Asteraceae family, extracted using water or ethanol solvents. Its main active ingredients include volatile oils, flavonoids, and polysaccharides, and quality control can be achieved through high-performance liquid chromatography (HPLC). This product is widely used in health foods and foods for special medical purposes, exhibiting anti-tumor and immunomodulatory biological activities. The upstream raw materials for Artemisia Extract mainly include artificially cultivated or wild Artemisia argyi plants and their leaves and stems. Downstream applications cover pharmaceuticals and health products (such as anti-inflammatory and antibacterial drugs and moxibustion products), cosmetics (such as anti-allergic and soothing skincare products), daily chemical products (such as mosquito repellent and antibacterial toiletries), and food and beverages (such as health teas), forming a complete industrial chain from agricultural planting to the development of high-value-added products. The global Artemisia Extract market has shown steady growth in recent years, primarily driven by consumers' increasing preference for natural plant ingredients, especially given its strong foundation in traditional medicine and health products in the Asia-Pacific region. Its core driver is the booming development of the health industry, with continuously expanding demand in various downstream sectors such as pharmaceuticals (e.g., anti-inflammatory, immune-modulating), personal care (soothing and anti-allergic skincare products,

mosquito repellents), and functional food and beverages. However, the market also faces challenges, including the significant impact of climate and geographical conditions on the cultivation and quality of *Artemisia argyi* raw materials, the need for improved standardization of extraction processes, and differences in regulatory certifications regarding product efficacy across different regional markets. In the future, with continuous advancements in extraction technology and in-depth clinical research on its active ingredients (such as eucalyptol and thujone), the market is expected to upgrade towards more efficient, standardized, and high-quality products, unlocking greater growth potential in the fields of natural medicine and green consumption.

The global Artemisia Extract market size was estimated at USD 213.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
