Abstracts

Arthroscopic scraper is a precision medical device used in arthroscopic surgery. It usually consists of a rotating blade and an electric or pneumatic drive system. Through the doctor's manipulation and the guidance of the arthroscopic device, it can accurately remove abnormal, damaged or irregular cartilage tissue, and can also suck out debris and impurities from the joint cavity through a suction device to keep the surgical area clean. With the continuous advancement of global medical technology and the intensification of the aging trend of the population, the demand for arthroscopic surgery is increasing, which has driven the growth of the arthroscopic scraper market. According to market research institutions, the global arthroscopic scraper market will maintain a steady growth trend in the next few years. As a populous country, China is also expanding the scope of application of arthroscopic surgery with the improvement of medical standards and the enhancement of people's health awareness. At the same time, the Chinese government is also actively promoting the localization of medical devices, providing more market opportunities for domestic arthroscopic scrapers. Therefore, the Chinese arthroscopic scraper market has huge development potential.

The global Arthroscopic Shavers market size was estimated at USD 2500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
