Abstracts

Articulated public transport is a member of public transport and belongs to the bus. It is usually designed as a single storey and includes two bus compartments. Its large capacity and high passenger capacity make articulated buses often used in rapid transit systems (BRT). The growing popularity of articulated bus over conventional bus will drive the growth prospects for the global articulated bus market for the next four years. One of the major factors responsible for the growing popularity of bus transit is its cost-effectiveness that provides urban transportation needs such as comfort, reliability, accessibility, and ease of use. In addition, the market is witnessing a high rate of adoption of articulated buses over conventional bus due to the rising investment in bus rapid transit (BRT) systems. Furthermore, the benefits of articulated buses also allow authorities to reduce investment in transit modes like trams, which will again fuel market growth.

The global Articulated Bus market size was estimated at USD 8417.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
