Abstracts

An articulated lorry baler, also known as a truck-mounted baler or mobile baler, is a specialized hydraulic baling machine integrated onto the chassis of an articulated lorry (semi-trailer truck) designed to compact and bale recyclable materials?such as cardboard, paper, plastics, or metals?directly at collection sites, enabling efficient transportation and processing. This equipment combines mobility with high-capacity baling functionality, allowing waste management companies, recycling facilities, and large commercial operations to reduce transport costs, minimize handling time, and maximize load efficiency by processing materials on-site before transit to recycling centers or landfills. Key components typically include a robust hydraulic press, a loading hopper, bale ejection mechanisms, and often automated control systems, making it an essential asset in modern waste logistics and circular economy operations.

The global Articulated Lorry Baler market size was estimated at USD 1240.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
