Abstracts

Articulated robots are industrial robots with rotary joints that provide a wide range of motion, making them versatile for various applications. In the food and beverage industry, articulated robots are used for tasks like packaging, palletizing, sorting, and handling food products to improve efficiency, consistency, and hygiene in production processes.

Market Drivers:

- Automation for Efficiency:** The demand for increased efficiency and productivity in food and beverage production drives the adoption of articulated robots to automate repetitive and labor-intensive tasks, such as packaging, sorting, and palletizing, leading to faster production rates and reduced labor costs.
- Improved Food Safety and Hygiene:** Articulated robots help maintain high levels of food safety and hygiene by reducing human contact with food products, minimizing the risk of contamination, and ensuring consistent handling practices in compliance with food safety regulations.
- Flexibility and Adaptability:** The flexibility of articulated robots to handle various food products, packaging formats, and production processes allows for quick reprogramming and reconfiguration to accommodate changing production needs and product variations.
- Enhanced Quality Control:** Articulated robots equipped with sensors and vision systems can perform quality control tasks such as inspecting products for defects, ensuring accurate packaging, and maintaining product consistency, leading to improved product quality and customer satisfaction.

Market Challenges:

- Food Safety Regulations:** Complying with stringent food safety regulations and standards, particularly in terms of ensuring robot cleanliness, preventing cross-contamination, and maintaining sanitary conditions in food handling, poses a challenge for integrating articulated robots in food production environments.
- Complex Programming and Integration:** Programming articulated robots for food and beverage applications, integrating them with existing production systems, and ensuring seamless communication between robots and other equipment require specialized expertise and

can be time-consuming. Gentle Handling of Delicate Products: Handling delicate food items such as fruits, baked goods, and confectionery products without causing damage or deformation requires precise control and specialized end-of-arm tools to ensure gentle handling and prevent product wastage. Cost of Implementation: The initial investment cost for acquiring and installing articulated robots, along with ongoing maintenance, training, and potential downtime for system upgrades or repairs, can be a significant financial consideration for food and beverage manufacturers, especially for smaller businesses.

The global Articulated Robots in Food and Beverage Industry market size was estimated at USD 471.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
