Abstracts

An articulating boom lift, also known as a knuckle boom or articulated boom lift, is a type of aerial work platform (AWP) characterized by multiple hinged sections that allow it to articulate, bend, and maneuver around obstacles with precision. These machines are designed to provide elevated access to hard-to-reach areas, combining significant vertical and horizontal reach with the ability to navigate through narrow or congested spaces. Powered by electric, diesel, or hybrid systems, articulating boom lifts are essential in industries such as construction, maintenance, industrial services, and event staging, where they enable tasks like electrical work, painting, glazing, and installation at heights while offering enhanced flexibility compared to telescopic or scissor lifts.
