### Report Overview

Artificial bone refers to artificial biological materials that can replace human bones or repair bone tissue defects. When joints need to be replaced or bone fractures are to be treated, the ideal way is to achieve self-repair of bones through tissue regeneration. However, in many cases, human bones cannot achieve self-repair, such as bone tissue necrosis and bone and joint trauma. At this time, artificial bones are needed. The development of ideal artificial bone materials is an important subject in the fields of medicine and biological materials science.
