Abstracts

Artificial butter flavoring may contain diacetyl, acetylpropionyl, or acetoin, three natural compounds in butter that contribute to its characteristic flavor. Because of this, manufacturers of margarine or similar oil-based products typically add diacetyl, acetylpropionyl and acetoin (along with beta carotene for the yellow color) to make the final product butter-flavored, because it would otherwise be relatively tasteless. The popularity of plant-based diets and veganism has raised a demand for dairy-free substitutes. To appeal to the expanding vegan and vegetarian customer base, butter flavor offers a means to mimic the flavor of butter in plant-based goods. To keep up with consumer demand, manufacturers are always creating fresh, innovative products. To capitalize on the appeal of the flavor, companies are releasing butter-flavored versions of already-existing items or developing whole new ones. To promote butter flavor and increase its market presence, effective marketing methods are also essential and are likely to bolster market growth in the coming years.

The global Artificial Butter Flavoring market size was estimated at USD 307.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
