Abstracts

Artificial ceramic teeth, also known as dental porcelain teeth or prosthetic ceramic crowns, are custom-manufactured dental restorations used to replace missing or damaged natural teeth, fabricated from advanced ceramic materials such as zirconia, lithium disilicate, or feldspathic porcelain to mimic the appearance, strength, and function of natural dentition. These prosthetics are primarily utilized in fixed prosthodontics, including single crowns, bridges, and implant-supported restorations, offering superior biocompatibility, aesthetic properties, and durability compared to metal-ceramic alternatives, and are indicated for patients requiring tooth rehabilitation due to decay, trauma, or cosmetic concerns. The product category encompasses both monolithic and layered ceramics, with material selection based on clinical requirements such as occlusion forces, aesthetic demands, and positional factors within the oral cavity.

The global Artificial Ceramic Teeth market size was estimated at USD 180.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
