Abstracts

Artificial Grass Infill refers to granular materials spread into the base of artificial grass systems. Its primary purpose is to provide stability to the synthetic blades, mimicking the feel and performance of natural grass by offering cushioning, shock absorption, and weight. Infill helps the blades stand upright, protects the turf backing from UV degradation, and can contribute to temperature regulation. Common infill materials include silica sand, crumb rubber (often from recycled tires), and various organic or coated infills designed for specific performance or environmental benefits.

The global Artificial Grass Infill market size was estimated at USD 1064.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
