Report Overview

The artificial heart-lung machine, also known as a cardiopulmonary bypass (CPB) machine, is a critical medical device used during open-heart surgeries to temporarily take over the functions of the heart and lungs, maintaining blood circulation and oxygenation while the heart is stopped. It consists of components such as a pump, oxygenator, heat exchanger, and monitoring systems to ensure precise control over blood flow, temperature, and gas exchange. The device is essential for complex cardiac procedures, including coronary artery bypass grafting (CABG), valve repairs, and congenital heart defect corrections, allowing surgeons to operate in a bloodless and motionless field.

The global market for artificial heart-lung machines is driven by the rising prevalence of cardiovascular diseases, an aging population, and advancements in cardiac surgery techniques. Increasing demand for minimally invasive procedures and hybrid operating rooms has also spurred innovation in CPB systems, with manufacturers focusing on compact, portable designs and improved biocompatibility. However, high costs, stringent regulatory approvals, and the need for highly trained perfusionists pose challenges to market expansion. North America and Europe dominate the market due to well-established healthcare infrastructure and high surgical volumes, while emerging economies in Asia-Pacific are witnessing rapid growth due to improving healthcare access and increasing cardiac surgery adoption. Key players in the industry include Medtronic, LivaNova, Terumo Corporation, and Getinge, who are investing in R&D to enhance device efficiency and patient safety. Future trends include the integration of AI for real-time monitoring and automation, as well as the development of next-generation oxygenators with reduced inflammatory responses.

Regulatory frameworks, reimbursement policies, and the availability of skilled professionals will continue to influence market dynamics, while the increasing burden of cardiovascular diseases ensures sustained demand for artificial heart-lung machines in both developed and developing regions.

The global Artificial Heart Lung Machine market size was estimated at USD 286.27 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 2.83% during the forecast period.
