## Abstracts

AI in biotech is critical for boosting invention in labs and throughout a medicine's or chemical compound's lifecycle. AI-based tools and applications aid in the development of molecule structures per the target market. Machine learning, a subset of artificial intelligence, aids in estimating combinations and permutations of different compounds to determine the best combination without the need for manual experiments in the lab. Artificial intelligence's application in biotech brings about innovations that aid predictive modeling to forecast market demand for a specific drug or chemical. AI in Biotech can also assist in the smart distribution of raw materials needed by the biotech sector via cloud computing. China and the United States are two leaders in AI industry. On the AI 100 list (2022) released by CB Insights, the number of companies in the United States ranks first, with more than 70 companies, followed by the United Kingdom, with 8 companies on the list. China and Canada both holds 5 companies on the list. According to data from the China Academy of Information and Communications Technology, the scale of China's core artificial intelligence industry reached \$508 billion in 2022, a year-on-year increase of 18%. From 2013 to November 2022, the cumulative number of patent applications for artificial intelligence inventions in the world reached 729,000, and the cumulative number of applications in China reached 389,000, accounting for 53.4%. However, the Global Artificial Intelligence Innovation Index Report 2021 released by the China Institute of Scientific and Technological Information shows that the overall strength of the United States is still far ahead. The number of artificial intelligence companies in the United States is about 4,670, while China has only 880. China's data center is less than 1/139 of that of the United States.

The global Artificial Intelligence (AI) in Biotechnology market size was estimated at USD 3483.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.50% during the forecast period.
