## Abstracts

Businesses are using artificial intelligence to improve the productivity of their employees. One of the benefits of AI for business is that it handles repetitive tasks across an organization so that employees can focus on creative solutions, complex problem solving, and impactful work. AI may increase the scope of work tasks where a worker can be removed from a situation that carries risk. In a sense, while traditional automation can replace the functions of a worker's body with a robot, AI effectively replaces the functions of their brain with a computer. Using AI and machine learning, systems can test hundreds of mathematical models of production and outcome possibilities, and be more precise in their analysis and results. This is done while adapting to new information such as new product innovations, supply chain disruptions, or sudden changes in demand.

The global Artificial Intelligence Ai In Workspace market size was estimated at USD 15470.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
