Report Overview

The working principle of the color sorter is that the selected material enters the machine from the top hopper, and through the vibration of the vibrator device, the selected material slides down the channel, accelerates the fall into the observation area in the sorting room, and passes through the sensor and the background plate. Pass. Under the action of the light source, according to the intensity and color of the light, the system generates an output signal to drive the solenoid valve to work to blow out the different-colored particles into the waste cavity of the hopper, and the good selected materials continue to fall to the finished cavity of the hopper. in order to achieve the purpose of selection. The artificial intelligence color sorter can perform machine learning.
