Abstracts

Artificial leisure turf, also known as synthetic or artificial grass, refers to a surface of synthetic fibers made to resemble natural grass, specifically designed for non-sporting recreational and aesthetic applications such as residential lawns, rooftop gardens, playgrounds, public parks, and commercial landscapes. Unlike sport-specific synthetic turf, which prioritizes performance metrics like ball roll and player traction, artificial leisure turf emphasizes visual appeal, durability under varied environmental conditions, comfort for casual use, and low maintenance requirements, often incorporating features such as UV resistance, drainage layers, and softer pile heights to enhance safety and usability in everyday leisure settings.

The global Artificial Leisure Turf market size was estimated at USD 5264.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
