Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Artificial Meat competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Artificial meat is made from plants such as soy. It is specially designed and made to look, taste and cook like traditional meat. Artificial meat can be burger patties, chicken nuggets, or even minced meat and sausages. As it grows in popularity, these vegetable-based alternatives are shaking up the meat industry and subverting everything we know about veggie burgers. Different manufacturers have different product formulations. Different types of protein have different tastes. Therefore, the source of plant protein in plant meat is basically a composite formula composed of soy protein, faba bean protein, chickpea protein, etc. In addition to the huge market size, the broad market prospects of artificial meat are also reflected in the smaller market competition in the "plant protein meat" industry. At present, there are relatively few companies producing plant protein meat worldwide. In the past two years, with the continuous entry of enterprises into this industry, there are already hundreds of production enterprises in the industry. It can be foreseen that the degree of competition in the industry will further increase in the next few years.

The global Artificial Meat market size was estimated at USD 1874.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Artificial Meat market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging
