Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Artificial Meat Products competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Artificial meat products are made from plants such as soybeans. They are specially designed and made to look, taste and cook like traditional meat. Artificial meat can be hamburger patties, chicken nuggets, or even minced meat and sausages. As it becomes more and more popular, these vegetable-based alternatives are shaking up the meat industry and subverting everything we know about vegetarian burgers. Different manufacturers have different product formulas. Different types of protein have different tastes. Therefore, the source of plant protein in plant meat is basically a composite formula composed of soy protein, broad bean protein and chickpea protein. In addition to the huge market size, the broad market prospects of artificial meat products are also reflected in the smaller market competition in the "plant protein meat" industry. At present, there are relatively few companies producing plant protein meat worldwide. In the past two years, with the continuous entry of enterprises into this industry, there are already hundreds of production enterprises in the industry. It can be foreseen that the degree of competition in the industry will further increase in the next few years.

The global Artificial Meat Products market size was estimated at USD 1874.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
